# EMC Test Report

---

Report No.: AGC00552190803EE01

**PRODUCT DESIGNATION** : Smart Phone

**BRAND NAME** : CUBOT

**MODEL NAME** : P30

**APPLICANT** : Shenzhen Huafurui Technology Co., Ltd.

**DATE OF ISSUE** : Sep. 27, 2019

**STANDARD(S)** : EN 301 489-1 V2.2.1: 2019-03(draft)  
EN 301 489-17 V3.2.0: 2017-03(draft)  
EN 301 489-19 V2.1.1: 2019-04  
EN 301 489-52 V1.1.0: 2016-11(draft)

**REPORT VERSION** : V1.1

## Attestation of Global Compliance (Shenzhen) Co., Ltd

**CAUTION:**

This report shall not be reproduced except in full without the written permission of the test laboratory and shall not be quoted out of context.

## 1. TEST REPORT CERTIFICATION

<b>Applicant</b>	Shenzhen Huafului Technology Co., Ltd.
<b>Address</b>	Unit 1401 &1402, 14/F, Jin qi zhi gu mansion (No. 4 building of Chong wen Garden), Crossing of the Liu xian street and Tang ling road, Tao yuan street, Nan shan district, Shenzhen,P.R. China
<b>Manufacturer</b>	Shenzhen Huafului Technology Co., Ltd.
<b>Address</b>	Unit 1401 &1402, 14/F, Jin qi zhi gu mansion (No. 4 building of Chong wen Garden), Crossing of the Liu xian street and Tang ling road, Tao yuan street, Nan shan district, Shenzhen,P.R. China
<b>Factory Name</b>	Shenzhen Huafului Technology Co., Ltd.
<b>Address</b>	Unit 1401 &1402, 14/F, Jin qi zhi gu mansion (No. 4 building of Chong wen Garden), Crossing of the Liu xian street and Tang ling road, Tao yuan street, Nan shan district, Shenzhen,P.R. China
<b>Product Designation</b>	Smart Phone
<b>Brand Name</b>	CUBOT
<b>Test Model</b>	P30
<b>Date of test</b>	Aug. 22, 2019~Sep. 04, 2019
<b>Deviation</b>	None
<b>Test Result</b>	<b>Pass</b>
<b>Report Template</b>	AGCRT-EC-3G2/EMC

We, Attestation of Global Compliance (Shenzhen) Co., Ltd., hereby certify that the submitted samples of the above item, as detailed in chapter 2.1 of this report, has been tested in our facility. The test record, data evaluation and test configuration represented herein are true and accurate accounts of measurements of the sample's EMC characteristics under the conditions herein specified. The test results of this report relate only to the tested sample identified in this report.

## 2. GENERAL INFORMATION

### 2.1. DESCRIPTION OF EUT

Details of technical specification refer to the description in follows:

EUT 1–Smart Phone	
Brand Name	CUBOT
Test Model	P30
Hardware Version	Q935_MB_V1.0
Software Version	CUBOT_P30_9091C-V01_20190807
GPRS Class	Class 12
Radio parts supported	<input checked="" type="checkbox"/> GSM <input checked="" type="checkbox"/> UMTS <input checked="" type="checkbox"/> LTE <input checked="" type="checkbox"/> GPS <input checked="" type="checkbox"/> BLUETOOTH <input checked="" type="checkbox"/> WIFI <input type="checkbox"/> NFC <input checked="" type="checkbox"/> EGPRS
EUT 2–AC/DC Adapter	
Brand Name	CUBOT
Test Model	HJ-0502000W2-EU
Manufacturer Name	Shenzhen Hua Jin Electronics Co.,Ltd
Manufacturer Address	Block E,Xinzhongqiao Industrial Park, Baolong Six Road, Baolong Industrial City,Longgang District, Shenzhen
Rated Input	AC100-240V, 50/60Hz, 0.3A
Rated Output	DC5.0V,2000mA
EUT 3–Li-ion Battery	
Brand Name	CUBOT
Test Model	P30
Manufacturer Name	Zhongshan Tianmao Battery Co., Ltd.
Manufacturer Address	NO.208, Qian Jin One Road, The Third Industrial Zone, Tanzhou Town, Zhongshan City, China
Capacitance	4000mAh
Rated Voltage	DC3.85V
Charging Voltage	DC4.4V

#### Note:

1. The EUT consists of **hand telephone set, li-ion battery, USB cable, charger and earphone.**
2. The Phone has dual-SIM card slots, but only one of the card can be transmitting when the two cards are inserting the phone together. Anyone of the SIM Card socket was tested.
3. Please refer to Appendix A for the photographs of the EUT. For a more detailed features description about the EUT, please refer to User's Manual.

## 2.2. OBJECTIVE

Perform Electro Magnetic Interference (EMI) and Electro Magnetic Susceptibility (EMS) tests for CE Marking.

**Attestation of Global Compliance**

Attestation of Global Compliance(Shenzhen)Co.,Ltd.

Add: 2/F., Building 2, Sanwei Chaxi Industrial Park, Sanwei Community,  
Hangcheng Street, Bao'an District, Shenzhen, Guangdong, China

Tel: +86-755 2523 4088

E-mail: agc@agc-cert.com

Service Hotline: 400 089 2118

### 2.3. TEST STANDARDS AND RESULTS

The EUT has been tested according to ETSI EN 301 489-1 V2.2.1: 2019-03; ETSI EN 301 489-19 V2.1.1 2019-04; ETSI EN 301 489-17 V3.2.0: 2017-03; ETSI EN 301 489 -52 V1.1.0 :2016-11.

<b>ETSI EN 301 489-1</b>	ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 1: Common technical requirements; Harmonised Standard for ElectroMagnetic Compatibility
<b>ETSI EN 301 489-17</b>	ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 17: Specific conditions for Broadband Data Transmission Systems; Harmonised Standard covering the essential requirements of article 3.1(b) of Directive 2014/53/EU
<b>ETSI EN 301 489-19</b>	ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 19: Specific conditions for Receive Only Mobile Earth Stations (ROMES) operating in the 1,5 GHz band providing data communications and GNSS receivers operating in the RNSS band (ROGNSS) providing positioning, navigation, and timing data; Harmonised Standard covering the essential requirements of article 3.1(b) of Directive 2014/53/EU
<b>ETSI EN 301 489-52</b>	ElectroMagnetic Compatibility (EMC) standard for radio equipment and services; Part 52: Specific conditions for Cellular Communication Mobile and portable (UE) radio and ancillary equipment; Harmonised Standard covering the essential requirements of article 3.1b of Directive 2014/53/EU

## 2.4. TEST ITEMS AND THE RESULTS

No.	Basic Standard	Test Type	Result
<b>EMISSION (EN 301 489-1 §7.1)</b>			
1	EN 55032	Radiated emission	PASS
2	EN 55032	Conducted emission, DC ports	N/A
3	EN 55032	Conducted emission, AC ports	PASS
4	EN 55032	Conducted emission, Telecom ports	N/A
5	EN 61000-3-2	Harmonic current emissions	N/A
6	EN 61000-3-3	Voltage fluctuations & flicker	PASS
<b>IMMUNITY (EN 301 489-1 §7.2)</b>			
7	EN 61000-4-2	Electrostatic discharge immunity	PASS
8	EN 61000-4-3	Radiated RF electromagnetic field immunity	PASS
9	EN 61000-4-4	Electrical fast transient/burst immunity	PASS
10	ISO 7637-1, -2	Transients and surges, DC ports	N/A
11	EN 61000-4-5	Surge immunity, AC ports, Telecom ports	PASS
12	EN 61000-4-6	Immunity to conducted disturbances induced by RF fields	PASS
13	EN 61000-4-11	Voltage dips and short interruptions immunity	PASS

### Note:

1. N/A- Not Applicable.
2. The latest versions of basic standards are applied.

## 2.5. ENVIRONMENTAL CONDITIONS

During the measurement the environmental conditions were within the listed ranges:

- Temperature: 15-35°C
- Humidity: 30-60 %
- Atmospheric pressure: 86-106 kPa

### 3. TEST MODE DESCRIPTION

<b>MODE 1 OPERATING MODE</b>	Specification A: GSM 900 Specification: MS + Battery + Charger + Earphone Specification B: DCS 1800 Specification: MS + Battery + Charger + Earphone Specification C: UMTS 2100 Specification: MS + Battery + Charger + Earphone Specification D: UMTS 900 Specification: MS + Battery + Charger + Earphone Specification E: GPRS 900 Specification: MS + Battery + Charger + Earphone Specification F: GPRS 1800 Specification: MS + Battery + Charger + Earphone Specification G: EGPRS 900 Specification: MS + Battery + Charger + Earphone Specification H: EGPRS 1800 Specification: MS + Battery + Charger + Earphone Specification I: LTE band 1 Specification: MS + Battery + Charger + Earphone Specification G: LTE band 3 Specification: MS + Battery + Charger + Earphone Specification K: LTE band 7 Specification: MS + Battery + Charger + Earphone Specification L: LTE band 8 Specification: MS + Battery + Charger + Earphone Specification M: LTE band 20 Specification: MS + Battery + Charger + Earphone
<b>MODE 2 IDLE MODE</b>	Specification: MS + Battery + Charger + Earphone
<b>MODE 3 BLUETOOTH MODE</b>	Specification: MS + Battery + Charger + Earphone
<b>MODE 4 WIFI MODE</b>	Specification: MS + Battery + Charger + Earphone
<b>MODE 5 GPS MODE</b>	Specification: MS + Battery + Charger + Earphone
<b>MODE 6 OPERATING MODE</b>	Specification A: GSM 900 Specification: MS + Battery Earphone Specification B: DCS 1800 Specification: MS + Battery Earphone Specification C: UMTS 2100 Specification: MS + Battery + Earphone Specification D: UMTS 900

	Specification: MS + Battery + Earphone Specification E: GPRS 900 Specification: MS + Battery + Earphone Specification F: GPRS 1800 Specification: MS + Battery + Earphone Specification G: EGPRS 900 Specification: MS + Battery + Earphone Specification H: EGPRS 1800 Specification: MS + Battery + Earphone Specification I: LTE band 1 Specification: MS + Battery + Earphone Specification J: LTE band 3 Specification: MS + Battery + Earphone Specification K: LTE band 7 Specification: MS + Battery + Earphone Specification L: LTE band 8 Specification: MS + Battery + Earphone Specification M: LTE band 20 Specification: MS + Battery + Earphone
<b>MODE 7 IDLE MODE</b>	Specification: MS + Battery + Earphone
<b>MODE 8 BLUETOOTH MODE</b>	Specification: MS + Battery + Earphone
<b>MODE 9 WIFI MODE</b>	Specification: MS + Battery + Earphone
<b>MODE 10 GPS MODE</b>	Specification: MS + Battery + Earphone
Note: EMI and EMS contain the above test modes. All the modes had been tested but only the worst data recorded in the report.	

#### 4. MEASUREMENT UNCERTAINTY

The uncertainty is calculated using the methods suggested in the “Guide to the Expression of Uncertainty in Measurement” (GUM) published by ISO.

- Uncertainty of Conducted Emission,  $U_c = \pm 3.2\text{dB}$
- Uncertainty of Radiated Emission below 1GHz,  $U_c = \pm 3.9\text{dB}$
- Uncertainty of Radiated Emission above 1GHz,  $U_c = \pm 4.8\text{dB}$

## 5. IDENTIFICATION OF THE RESPONSIBLE TESTING LOCATION

<b>Test Site</b>	Attestation of Global Compliance (Shenzhen) Co., Ltd
<b>Location</b>	1-2/F, Building 19, Junfeng Industrial Park, Chongqing Road, Heping Community, Fuhai Street, Bao 'an District, Shenzhen, Guangdong, China

### LIST OF EQUIPMENTS USED OF AGC

Description	Manufacturer	Model No.	S/N	Calibration Date	Calibration Due.
Universal Radio Communication Tester	R&S	CMU200	120237	Feb. 27, 2019	Feb. 26, 2020
Wireless Communication Test Set	AGILENT	8960	GB42361316	Feb. 27, 2019	Feb. 26, 2020
Wireless communication test	R&S	CMW500	120909	July 11,2019	July 10, 2020

## 6. EMISSION TEST

### 6.1. MAINS TERMINAL DISTURBANCE VOLTAGE MEASUREMENT

#### 6.1.1 LIMITS OF MAINS TERMINAL DISTURBANCE VOLTAGE AND TABLE A OF EN55032

Frequency range (MHz)	Limits (dBuV), Class B ITE	
	Quasi-peak	Average
0.15 - 0.50	66 to 56	56 to 46
0.50 - 5	56	46
5 - 30	60	50

**Note:**

1. The lower limit shall apply at the transition frequencies.
2. The limit decreases linearly with the logarithm of the frequency in the range 0.15MHz to 0.50MHz.

#### 6.1.2 TEST PROCEDURE

1. The EUT was placed 0.4 meters from the conducting wall of shielded room with EUT being connected to the power mains through a line impedance stabilization network (AMN). The LISN provide 50Ω/50μH of coupling impedance for the measuring instrument.
2. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
3. The frequency range from 150 kHz to 30 MHz was searched. Emission levels over 20dB under the prescribed limits are not reported.

### 6.1.3 TEST SETUP

For the actual test configuration, please refer to the related item - Photographs of the Test Configuration.

### 6.1.4 TEST RESULT

All test modes were carried out for all operation modes

The worst test data (Specification A GSM 900 of mode 1) was showed as the follow:

# LINE CONDUCTED EMISSION TEST-L

## MEASUREMENT RESULT: "TEST\_fin"

8/26/2019 9:04AM

Frequency MHz	Level dBμV	Transd dB	Limit dBμV	Margin dB	Detector	Line	PE

## 6.2. RADIATED DISTURBANCE MEASUREMENT

### 6.2.1. LIMITS OF RADIATED DISTURBANCES

Radiated Emission at Frequencies up to 1GHz

For Class B Equipment SAC/OATS

EN 55032 Table clause	Frequency range (MHz)	Distance (m)	Detector type	Limits (dBuV/m)
A4.1	30 - 230	10	Quasi Peak	30
	230 - 1000			37
A4.2	30 - 230	3	Quasi Peak	40
	230 - 1000			47

Radiated Emission at Frequencies above 1GHz

For Class B Equipment FSOATS

EN 55032 Table clause	Frequency range (MHz)	Distance (m)	Detector type	Limits (dBuV/m)
A5.1	1000 - 3000	3	Average	50
	3000 - 6000			54
A5.2	1000 - 3000		Peak	70
	3000 - 6000			74

### 6.2.2. TEST CONDITION:

The highest internal source of an EUT is defined as the highest frequency generated or used within the EUT or on which the EUT operates or tunes.

If the highest frequency of the internal sources of the EUT is less than 108 MHz, the measurement shall only be made up to 1 GHz.

If the highest frequency of the internal sources of the EUT is between 108 MHz and 500 MHz the measurement shall only be made up to 2 GHz.

If the highest frequency of the internal sources of the EUT is between 500 MHz and 1 GHz, the measurement shall only be made up to 5 GHz.

If the highest frequency of the internal sources of the EUT is above 1 GHz, the measurement shall be made up to 5 times the highest frequency or 6 GHz, whichever is less.

Notes:

1. The lower limit shall apply at the transition frequency.
2. Additional provisions may be required for cases where interference occurs.

### 6.2.2. TEST PROCEDURE

- (1). The EUT was placed on the top of an insulating table 0.8 meters above the ground at a semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- (2). The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- (3). The antenna is a broadband antenna, and its height is varied from 1 to 4 meter above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- (4). For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to the heights from 1 to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- (5). The test-receiver system was set to Peak Detector Function and Specified Bandwidth with Maximum Hold Mode. If the emission level of the EUT in peak mode was 3 dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emission that did not have 3 dB margin would be retested one by one using the quasi-peak method.
- (6). For emissions above 1G, the Horn Antenna is used. and its height is varied from 1 to 4 meter above the ground and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- (7). The EUT was arranged according to Clause 8 of CISPR 16-1-4. Use 1MHz VBW and RBW for peak reading. Then 1MHz RBW and 10Hz VBW for average reading in spectrum analyzer.
- (8). For testing above 1GHz, the emissions level of the EUT in peak mode was lower than average limit (that means the emissions level in peak mode also complies with the limit in average mode), then testing will be stopped and peak values of EUT will be reported, otherwise, the emissions will be measured in average mode again and reported.

Note: Refer to the clause 8.2 in EN 301 489-1, enclosure of ancillary equipment measured on a stand-alone basis. Ancillary equipment can also be measured in combination with the radio equipment under test. When the ancillary equipment is measured in combination with the radio equipment, radiated emissions from the transmitter/transceiver shall be ignored, but recorded in the test report.

### 6.2.3. BLOCK DIAGRAM OF TEST SETUP

#### Radiated Disturbance 30M to1 GHz

Receiver

#### Radiated Disturbance above 1 GHz

Receiver

For the actual test configuration, please refer to the related item-Photographs of the Test Configuration.

## 6.2.4 TEST RESULT

All test modes were carried out for all operation modes

The worst test data (Specification A GSM 900 of mode 1) was showed as the follow:

Note: The filter has been used in this test.

### RADIATED EMISSION BELOW 1GHZ– HORIZONTAL

NO.	Freq. [MHz]	Level [dBμV/m]	Factor [dB]	Limit [dBμV/m]	Margin [dB]	Height [cm]	Angle [°]	Polarity
1	48.4300	23.88	14.71	40.00	16.12	100	357	Horizontal
2	77.5300	24.43	10.66	40.00	15.57	200	210	Horizontal
3	129.9100	23.58	14.14	40.00	16.42	200	42	Horizontal
4	207.5100	28.10	12.52	40.00	11.90	100	94	Horizontal
5	445.1600	30.62	20.89	47.00	16.38	100	279	Horizontal
6	726.4600	33.89	26.61	47.00	13.11	100	359	Horizontal

## RADIATED EMISSION BELOW 1GHZ- VERTICAL

NO.	Freq. [MHz]	Level [dBμV/m]	Factor [dB]	Limit [dBμV/m]	Margin [dB]	Height [cm]	Angle [°]	Polarity
1	51.3400	29.30	14.57	40.00	10.70	100	151	Vertical
2	77.5300	27.97	10.66	40.00	12.03	100	189	Vertical
3	132.8200	26.53	14.35	40.00	13.47	100	189	Vertical
4	181.3200	30.61	12.93	40.00	9.39	100	341	Vertical
5	233.7000	27.03	14.33	47.00	19.97	100	348	Vertical

### 6.3. HARMONIC CURRENT MEASUREMENT

#### 6.3.1 LIMITS OF HARMONIC CURRENT

Harmonic current emissions evaluate the potential for the EUT to cause distortion on the AC power lines. It is applicable to electrical and electronic equipment having an input current  $\leq 16$  A per phase, and intended to be connected to public low-voltage distribution systems.

Limits for Class A Equipment	
Harmonics Order n	Max. permissible harmonic current (A)
Odd harmonics	
3	2.30
5	1.14
7	0.77
9	0.40
11	0.33
13	0.21
$15 \leq n \leq 39$	$0.15 \times 15/n$
Even harmonics	
2	1.08
4	0.43
6	0.30
$8 \leq n \leq 40$	$0.23 \times 8/n$

**Note:**

1. According to section 5 of EN61000-3-2, the EUT is Class A equipment.
2. The above limits are for all applications having an active input power >75W. No limits apply for equipment with an active input power up to and including 75W.

#### 6.3.2 TEST PROCEDURE

1. The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the maximum harmonic components under normal operating conditions for each successive harmonic component in turn.
2. The correspondent test program of test instrument to measure the current harmonics emanated from EUT is chosen. The measure time shall be not less than the necessary for the EUT to be exercised.

### 6.3.3 TEST SETUP

For the actual test configuration, please refer to Appendix II : Photographs of the Test Configuration.

#### 6.3.4 TEST RESULT

**Note:**

1. The active input power of the EUT is **less than 75W**.
2. No limits apply for equipment with an active input power up to and including 75W.

## 6.4. VOLTAGE FLUCTUATIONS AND FLICK MEASUREMENT

### 6.4.1. LIMITS OF VOLTAGE FLUCTUATIONS AND FLICK

The objective of voltage changes, voltage fluctuations and flicker in public low voltage supply systems during equipment with rated current  $\leq 16$  A per phase, ensures that home appliances and certain other electrical equipment do not adversely affect lighting equipment when connected to the same power system.

Test Item	Limit	Note
$P_{st}$	1.0	$P_{st}$ means Short-term flicker indicator
$P_{lt}$	0.65	$P_{lt}$ means long-term flicker indicator
$T_{dt}$	0.2	$T_{dt}$ means maximum time that $d_t$ exceeds 3%
$d_{max}(\%)$	4%	$d_{max}$ means maximum relative voltage change.
$d_c(\%)$	3%	$d_c$ means relative steady-state voltage change.

### 6.4.2. TEST PROCEDURE

- The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the most unfavorable sequence of voltage changes under normal conditions
- During the flick measurement, the measure time shall include that part of whole operation changes. The observation period for short-term flicker indicator is 10 minutes and the observation period for long-term flicker indicator is 2 hours.

### 6.4.3. TEST SETUP

Same as 3.4.3

### 6.4.4. TEST RESULT

Test Specification

Test Frequency	50Hz	Test Voltage	AC 230V
Waveform	Sine	Test Time	10 minutes( $P_{st}$ ); 2 hours ( $P_{lt}$ )

All test modes were carried out for all operation modes

Only the test result of the worst case GSM 900 as follow:

Test Parameter	Measurement Value	Limit	Remarks
$P_{st}$	0.015	1.0	Pass
$P_{lt}$	0.006	0.65	Pass
$T_{dt(s)}$	0.022	0.2	Pass
$d_{max}(\%)$	0.015%	4%	Pass
$d_c(\%)$	0.075%	3%	Pass

## 7. IMMUNITY TEST

### 7.1. EUT SETUP AND OPERATING CONDITIONS

The battery was in full voltage and the charger was connected to the EUT to keep the voltage constant during the tests. During the measurement the environmental conditions were within the listed ranges:

- Temperature: 15-35°C
- Humidity: 30-60 %
- Atmospheric pressure: 86-106 kPa

### 7.2. GENERAL PERFORMANCE CRITERIA

#### 7.2.1. GENERAL PERFORMANCE CRITERIA

The EUT tested system was configured as the statements of 2.2 Unless otherwise a special operating condition is specified in the follows during the testing.

Criteria	During the test	After the test
<b>A</b>	Shall operate as intended May show degradation of performance (see note 1) Shall be no loss of function Shall be no unintentional transmissions	Shall operate as intended Shall be no degradation of performance (see note 2) Shall be no loss of function Shall be no loss of stored data or user programmable functions
<b>B</b>	May show loss of function (one or more) May show degradation of performance (see note 1) No unintentional transmissions	Functions shall be self-recoverable Shall operate as intended after recovering Shall be no degradation of performance (see note 2) Shall be no loss of stored data or user programmable functions
<b>C</b>	May be loss of function (one or more)	Functions shall be recoverable by the operator Shall operate as intended after recovering Shall be no degradation of performance (see note 2)

NOTE 1: Degradation of performance during the test is understood as a degradation to a level not below a minimum performance level specified by the manufacturer for the use of the apparatus as intended. In some cases the specified minimum performance level may be replaced by a permissible degradation of performance. If the minimum performance level or the permissible performance degradation is not specified by the manufacturer then either of these may be derived from the product description and documentation (including leaflets and advertising) and what the user may reasonably expect from the apparatus if used as intended.

NOTE 2: no degradation of performance after the test is understood as any degradation below a minimum performance level specified by the manufacturer for the use of the apparatus as intended. In some cases the specified minimum performance level may be replaced by a permissible degradation of performance. After the test no change of actual operating data or user retrievable data is allowed. If the minimum performance level or the permissible performance degradation is not specified by the manufacturer then either of these may be derived from the product description and documentation (including leaflets and advertising) and what the user may reasonably expect from the apparatus if used as intended.

## 7.2.2. PERFORMANCE CRITERIA FOR TT AND TR TO EUT

### PERFORMANCE FOR TT

The performance criteria B shall apply, except for voltage dips of 100 ms and voltage interruptions of 5 000 ms duration, for which performance criteria C shall apply. Tests shall be repeated with the EUT in standby mode (if applicable) to ensure that unintentional transmission does not occur. In systems using acknowledgement signals, it is recognized that an acknowledgement (ACK) or not-acknowledgement (NACK) transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

### PERFORMANCE FOR TR

The performance criteria B shall apply, except for voltage dips of 100 ms and voltage interruptions of 5 000 ms duration for which performance criteria C shall apply. Where the EUT is a transceiver, under no circumstances, shall the transmitter operate unintentionally during the test. In systems using acknowledgement signals, it is recognized that an ACK or NACK transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

### PERFORMANCE FOR CT

The performance criteria A shall apply. Tests shall be repeated with the EUT in standby mode (if applicable) to ensure that unintentional transmission does not occur. In systems using acknowledgement signals, it is recognized that an Acknowledgement (ACK) or Not Acknowledgement (NACK) transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

### PERFORMANCE FOR CR

The performance criteria A shall apply. Where the EUT is a transceiver, under no circumstances, shall the transmitter operate unintentionally during the test. In systems using acknowledgement signals, it is recognized that an ACK or NACK transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

### 7.2.3. PERFORMANCE CRITERIA FOR (GSM/ WCDMA/LTE)

CLAUSE 6 of EN301 489 – 52	
Criteria	Performance criteria
CT/CR	<p>During and after the test, the apparatus shall continue to operate as intended. No degradation of performance or loss of function is allowed below a permissible performance level specified by the manufacturer when the apparatus is used as intended. At the conclusion of the test, the EUT shall operate as intended with no loss of user control functions or stored data, and the communication link shall have been maintained. In addition to confirming the above performance during a call, the test shall also be performed in idle mode, and the transmitter shall not unintentionally operate.</p> <p>The EUT shall operate as its intended operating condition during and after the test.</p> <p>The EUT (transmitter) uplink speech output level shall be at least 35dB less than the previously recorded reference.</p> <p>The EUT (receiver) shall show the RXQUAL of the GSM downlink does not exceed the value of three, and the BER of the WCDMA shall no greater than 0.1%, and measure during each individual exposure in the test sequence.</p> <p>The EUT (receiver) downlink speech output level shall be at least 35dB less than the previously recorded reference.</p> <p>The EUT shall show no loss of user control functions or stored data and the communication link shall be maintained during and after the test.</p> <p>The EUT shall show no unintentional responses when it is in idle condition.</p>
TT/TR	<p>After the test, the apparatus shall continue to operate as intended. No degradation of performance or loss of function is allowed below a permissible performance level specified by the manufacturer, when the apparatus is used as intended. At the conclusion of each exposure the EUT shall operate with no user noticeable loss of the communication link. At the conclusion of the total test comprising the series of individual exposures, the EUT shall operate as intended with no loss of user control functions or stored data, as declared by the manufacturer, and the communication link shall have been maintained. In addition to confirming the above performance during a call, the test shall also be performed in idle mode, and the transmitter shall not unintentionally operate.</p>

#### Note:

For data transmission, the EUT was assessed in the following methods:

For WCDMA testing, the BER (as referred in TS 134 109 [9]) is used, it shall not exceed 0.1% during the test sequence.

For LTE testing, the throughput (as referred in TS 134 109 [9]) is used, it shall not exceed 0.1% during the test

sequence.

**Note:** All test modes have been tested during the test.

## 7.2.4 GENERAL PERFORMANCE CRITERIA TO BT/ WIFI

Criteria	During the test	After the test
A	Shall operate as intended May show degradation of performance (see note 1) Shall be no loss of function Shall be no unintentional transmissions	Shall operate as intended Shall be no degradation of performance (see note 2) Shall be no loss of function Shall be no loss of stored data or user programmable functions
B	May show loss of function (one or more) May show degradation of performance (see note 1) No unintentional transmissions	Functions shall be self-recoverable Shall operate as intended after recovering Shall be no degradation of performance (see note 2) Shall be no loss of stored data or user programmable functions
C	May be loss of function (one or more)	Functions shall be recoverable by the operator Shall operate as intended after recovering Shall be no degradation of performance (see note 2)

NOTE 1: Degradation of performance during the test is understood as a degradation to a level not below a minimum performance level specified by the manufacturer for the use of the apparatus as intended. In some cases the specified minimum performance level may be replaced by a permissible degradation of performance. If the minimum performance level or the permissible performance degradation is not specified by the manufacturer then either of these may be derived from the product description and documentation (including leaflets and advertising) and what the user may reasonably expect from the apparatus if used as intended.

NOTE 2: no degradation of performance after the test is understood as any degradation below a minimum performance level specified by the manufacturer for the use of the apparatus as intended. In some cases the specified minimum performance level may be replaced by a permissible degradation of performance. After the test no change of actual operating data or user retrievable data is allowed. If the minimum performance level or the permissible performance degradation is not specified by the manufacturer then either of these may be derived from the product description and documentation (including leaflets and advertising) and what the user may reasonably expect from the apparatus if used as intended.

### 7.2.5 PERFORMANCE CRITERIA FOR TT AND TR TO BT/ WIFI

#### PERFORMANCE FOR TT TO BT/WIFI

The performance criteria B shall apply, except for voltage dips of 100 ms and voltage interruptions of 5 000 ms duration, for which performance criteria C shall apply. Tests shall be repeated with the EUT in standby mode (if applicable) to ensure that unintentional transmission does not occur. In systems using acknowledgement signals, it is recognized that an acknowledgement (ACK) or not-acknowledgement (NACK) transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

#### PERFORMANCE FOR TR TO BT/WIFI

The performance criteria B shall apply, except for voltage dips of 100 ms and voltage interruptions of 5 000 ms duration for which performance criteria C shall apply. Where the EUT is a transceiver, under no circumstances, shall the transmitter operate unintentionally during the test. In systems using acknowledgement signals, it is recognized that an ACK or NACK transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

### 7.2.6 PERFORMANCE CRITERIA FOR CT AND CR TO BT/ WIFI

#### PERFORMANCE FOR CT TO BT/WIFI

The performance criteria A shall apply. Tests shall be repeated with the EUT in standby mode (if applicable) to ensure that unintentional transmission does not occur. In systems using acknowledgement signals, it is recognized that an Acknowledgement (ACK) or Not Acknowledgement (NACK) transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

#### PERFORMANCE FOR CR TO BT/WIFI

The performance criteria A shall apply. Where the EUT is a transceiver, under no circumstances, shall the transmitter operate unintentionally during the test. In systems using acknowledgement signals, it is recognized that an ACK or NACK transmission may occur, and steps should be taken to ensure that any transmission resulting from the application of the test is correctly interpreted.

### 7.3. ELECTROSTATIC DISCHARGE IMMUNITY TEST

#### 7.3.1. TEST SPECIFICATION

Basic Standard	EN 61000-4-2
Discharge Impedance	330Ω / 150 pF
Discharge Voltage	Air Discharge –8 kV , Contact Discharge – 4 kV
Polarity	Positive / Negative
Number of Discharge	Minimum 20 times at each test point
Discharge Mode	Single discharge
Discharge Period	1-second minimum
Test Conditions	Temperature/ Humidity:25.3℃/56%

#### 7.3.2. TEST PROCEDURE

The test procedure was in accordance with EN 61000-4-2:

- Electrostatic discharges were applied only to those points and surfaces of the EUT that are accessible to users during normal operation.
- The test was performed with at least ten single discharges on the pre-selected points in the most sensitive polarity.
- The time interval between two successive single discharges was at least 1 second.
- The ESD generator was held perpendicularly to the surface to which the discharge was applied and the return cable was at least 0.2 meters from the EUT.
- Contact discharges were applied to the non-insulating coating, with the pointed tip of the generator penetrating the coating and contacting the conducting substrate.
- Air discharges were applied with the round discharge tip of the discharge electrode approaching the EUT as fast as possible (without causing mechanical damage) to touch the EUT. After each discharge, the ESD generator was removed from the EUT and re-triggered for a new single discharge. The test was repeated until all discharges were completed.
- At least ten single discharges (in the most sensitive polarity) were applied to the Horizontal Coupling Plane at points on each side of the EUT. The ESD generator was positioned vertically at a distance of 0.1 meters from the EUT with the discharge electrode touching the HCP.
- At least ten single discharges (in the most sensitive polarity) were applied to the center of one vertical edge of the Vertical Coupling Plane in sufficiently different positions that the four faces of the EUT were completely illuminated. The VCP (dimensions 0.5m×0.5m) was placed vertically to and 0.1 meters from the EUT.

### 7.3.3. TEST SETUP

For the actual test configuration, please refer to Appendix II : Photographs of the Test Configuration.

## 7.4. RADIATED, RADIO FREQUENCY ELECTROMAGNETIC FIELD IMMUNITY TEST

### 7.4.1 TEST SPECIFICATION

Basic Standard	EN 61000-4-3
Frequency Range	80 MHz – 6000MHz
Field Strength	3V/m
Modulation	1 kHz sine wave, 80%, AM modulation
Frequency Step	1% of fundamental
Polarity of Antenna	Horizontal and Vertical
Test Distance	3m
Antenna Height	1.5m
Dwell Time	3 seconds
Test Conditions	Temperature/ Humidity:25°C/50%

### 7.4.2 TEST PROCEDURE

The test procedure was in accordance with EN 61000-4-3.

- The testing was performed in a fully anechoic chamber. The transmit antenna was located at a distance of 3 meters from the EUT.
- The test signal was 80% amplitude modulated with a 1 kHz sine wave.
- The frequency range was swept from 80 MHz – 6000MHz to 2700MHz with the exception of the exclusion band for transmitters, receivers and duplex transceivers. The rate of sweep did not exceed  $1.5 \times 10^{-3}$  decade/s. Where the frequency range is swept incrementally, the step size was 1% of fundamental.
- The dwell time at each frequency shall be not less than the time necessary for the EUT to be able to respond.
- The field strength level was 3V/m.
- The test was performed with the EUT exposed to both vertically and horizontally polarized fields on each of the four sides.
- Downlink Mode: the audio source was adjusted to achieve a reference level equivalent to a SPL of 0 dBPa at 1 kHz at the input of the acoustic coupler for the downlink, the reading of the audio level meter was recorded as a reference level. During the test, the downlink speech output level was monitored, it was confirmed to be at least 35 dB less than the previously- recorded reference level.
- Uplink Mode: EUT is used for this calibration, the output of the audio source was adjusted to achieve a reference level equivalent to a SPL of –5 dBPa at 1kHz at the Mouth Reference Point (MRP), the reading of the audio level meter, which was connected to the output of the communication tester, was recorded as a reference level. During the test, the uplink speech output level was monitored, it was confirmed to be at least 35 dB less than the previously- recorded reference level.

### 7.4.3 TEST SETUP

For the actual test configuration, please refer to Appendix II : Photographs of the Test Configuration.

#### 7.4.4 TEST RESULT

##### EN 301 489-52 V1.1.0 MS (MODE 1) TEST RESULT

EUT Working Mode	Antenna Polarity	Frequency (MHz)	Field Strength (V/m)	Observation	Conclusion
GSM/GPRS/EGPRS 900 MHz, Traffic	Vertical	80-6000	3	CT,CR	Pass
	Horizontal	80-6000	3	CT,CR	Pass
GSM/GPRS/EGPRS 900 MHz, Idle	Vertical	80-6000	3	CT,CR	Pass
	Horizontal	80-6000	3	CT,CR	Pass
DCS/GPRS/EGPRS 1800 MHz, Traffic	Vertical	80-6000	3	CT,CR	Pass
	Horizontal	80-6000	3	CT,CR	Pass
DCS/GPRS/EGPRS 1800 MHz, Idle	Vertical	80-6000	3	CT,CR	Pass
	Horizontal	80-6000	3	CT,CR	Pass

##### EN 301 489-52 V1.1.0 UMTS (MODE 1) TEST RESULT

EUT Working Mode	Antenna Polarity	Frequency (MHz)	Field Strength (V/m)	Observation	Conclusion	Side
UMTS/HSPA 2100 MHz, Traffic	Vertical	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear
	Horizontal	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear
UMTS/HSPA 2100 MHz, Idle	Vertical	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear
	Horizontal	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear
UMTS/HSPA 900 MHz, Traffic	Vertical	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear
	Horizontal	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear
UMTS/HSPA 900 MHz, Idle	Vertical	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear
	Horizontal	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear

**Note:** In the data transfer mode, the BER (as referred in TS 134 109 [8]) is used, it shall not exceed 0,001 during the test sequence, in the speech mode, the performance criteria shall be that the uplink and downlink speech output levels shall be at least 35 dB less than the recorded reference levels, when measured through an audio band pass filter of width 200 Hz, centred on 1 kHz. in idle mode, the transmitter is not unintentionally operate.

# EN 301 489-52 V1.1.0 LTE (MODE 1) TEST RESULT

EUT Working Mode	Antenna Polarity	Frequency (MHz)	Field Strength (V/m)	Observation	Conclusion	Side
LTE 2100 MHz, Traffic	Vertical	80-6000	3	CT,CR	Pass	Right, Left, Front, Rear

## 7.5. ELECTRICAL FAST TRANSIENT/BURST IMMUNITY TEST

### 7.5.1 TEST SPECIFICATION

Basic Standard	EN 61000-4-4
Test Voltage	a.c. power port – 1 kV; communication port 0.5kV
Polarity	Positive/Negative
Impulse Frequency	5kHz
Impulse wave shape	5/50ns
Burst Duration	15ms
Burst Period	300ms
Test Duration	Not less than 1 min.
Test Conditions	Temperature/ Humidity:25.4°C/56%

### 7.5.2 TEST PROCEDURE

- The EUT was tested with 1000 volt discharges to the AC power input leads.
- Both positive and negative polarity discharges were applied.
- The length of the “hot wire” from the coaxial output of the EFT generator to the terminals on the EUT should not exceed 1 meter.
- The duration time of each test sequential was 1 minute.
- The transient/burst waveform was in accordance with EN 61000-4-4, 5/50ns.
- Test communication port according EN 61000-4-4 with clamp

### 7.5.3 TEST SETUP

## 7.6. SURGE IMMUNITY TEST

### 7.6.1 TEST SPECIFICATION

Basic Standard	EN 61000-4-5
Waveform	Voltage 1.2/50 $\mu$ s; Current 8/20 $\mu$ s
Test Voltage	a.c. power port, line to ground 2 kV, line to line 1.0 Kv communication port 1kV
Polarity	Positive/Negative
Phase Angle	0°, 90°, 180°, 270°
Repetition Rate	60sec
Times	5 time/each condition.
Test Conditions	Temperature/ Humidity:24.9°C/56.5%

### 7.6.2 TEST PROCEDURE

- The EUT and the auxiliary equipment were placed on a table of 0.8m heights above a metal ground reference plane. The size of ground plane is greater than 1m $\times$ 1m and project beyond the EUT by at least 0.1m on all sides. The ground plane is connected to the protective earth. The length of power cord between the coupling device and the EUT was less than 2 meters (provided by the manufacturer).
- The EUT was connected to the power mains through a coupling device that directly couples the surge interference signal. The surge noise was applied synchronized to the voltage phase at the zero crossing and the peak value of the AC voltage wave (positive and negative).
- The surges were applied line to line and line(s) to earth. When testing line to earth the test voltage was applied successively between each of the lines and earth. Steps up to the test level specified increased the test voltage. All lower levels including the selected test level were tested. The polarity of each surge level included positive and negative test pulses.

Criteria meet	<input checked="" type="checkbox"/> A / <input type="checkbox"/> B / <input type="checkbox"/> C

## 7.7. IMMUNITY TO CONDUCTED DISTURBANCES INDUCED BY RF FIELDS

### 7.7.1 TEST SPECIFICATION

Basic Standard	EN 61000-4-6
Frequency Range	0.15 MHz – 80 MHz
Field Strength	3Vrms
Modulation	1 kHz Sine Wave, 80% AM
Frequency Step	1% of fundamental
Coupled Cable	a.c. power line, Communication Line
Coupling Device	CDN-M2 ,Clamp
Test Conditions	Temperature/ Humidity:24.9°C/50%

### 7.7.2 TEST PROCEDURE

- The EUT shall be tested within its intended operating and climatic conditions.
- The test shall be performed with the test generator connected to each of the coupling and decoupling devices in turn, while the other non-excited RF input ports of the coupling devices are terminated by a 50-ohm load resistor.
- The test signal was 80% amplitude modulated with a 1 kHz sine wave
- The frequency range is swept from 150 kHz to 80 MHz, using the signal level established during the setting process and with a disturbance signal of 80% amplitude. The sweep rate shall not exceed  $1.5 \times 10^{-3}$  decades/s. The step size shall not exceed 1% of the start and thereafter 1% of the preceding frequency value where the frequency is swept incrementally.
- The dwell time at each frequency shall not be less than the time necessary for the EUT to be exercised, and able to respond. Sensitive frequencies such as clock frequencies and harmonics or frequencies of dominant interest, shall be analyzed separately.
- Attempts should be made to fully exercise the EUT during test, and to fully interrogate all exercise modes selected for susceptibility.
- Downlink Mode: the audio source was adjusted to achieve a reference level equivalent to a SPL of 0 dBPa at 1 kHz at the input of the acoustic coupler for the downlink, the reading of the audio level meter was recorded as a reference level. During the test, the downlink speech output level was monitored, it was confirmed to be at least 35 dB less than the previously- recorded reference level.
- Uplink Mode: EUT is used for this calibration, the output of the audio source was adjusted to achieve a reference level equivalent to a SPL of –5 dBPa at 1kHz at the Mouth Reference Point (MRP), the reading of the audio level meter, which was connected to the output of the communication tester, was recorded as a reference level. During the test, the uplink speech output level was monitored, it was confirmed to be at least 35 dB less than the previously- recorded reference level.

### 7.7.3 TEST SETUP

For the actual test configuration, please refer to Appendix II : Photographs of the Test Configuration.

#### 7.7.4 TEST RESULT

##### EN 301 489-52 V1.1.0 MS (MODE 1) TEST RESULT

EUT Working Mode	Antenna Polarity	Frequency (MHz)	Field Strength (Vrms)	Observation	Conclusion
GSM/GPRS/EGPRS 900 MHz, Traffic	a.c. port	0.15-80	3	CT,CR	Pass
GSM/GPRS/EGPRS 900 MHz, Idle	a.c. port I	0.15-80	3	CT,CR	Pass
DCS/GPRS/EGPRS 1800 MHz, Traffic	a.c. port	0.15-80	3	CT,CR	Pass
DCS/GPRS/EGPRS 1800 MHz, Idle	a.c. port	0.15-80	3	CT,CR	Pass

Note: There was not any unintentional transmission discovered in idle mode

##### EN 301 489-52 V1.1.0 UMTS (MODE 1) TEST RESULT

EUT Working Mode	Antenna Polarity	Frequency (MHz)	Field Strength (Vrms)	Observation	Conclusion
UMTS/ HSPA 2100 MHz, Traffic	a.c. port	0.15-80	3	CT,CR	Pass
UMTS HSPA 2100 MHz, Idle	a.c. port I	0.15-80	3	CT,CR	Pass
UMTS HSPA 900 MHz, Traffic	a.c. port	0.15-80	3	CT,CR	Pass
UMTS HSPA 900 MHz, Idle	a.c. port I	0.15-80	3	CT,CR	Pass

Note: There was not any unintentional transmission discovered in idle mode

**Note:** In the data transfer mode, the BER (as referred in TS 134 109 [8]) is used, it shall not exceed 0,001 during the test sequence, in the speech mode, the performance criteria shall be that the uplink and downlink speech output levels shall be at least 35 dB less than the recorded reference levels, when measured through an audio band pass filter of width 200 Hz, centred on 1 kHz. in idle mode, the transmitter is not unintentionally operate.

# EN 301 489-52 V1.1.0 LTE (MODE 1) TEST RESULT

## 7.8. VOLTAGE DIPS AND SHORT INTERRUPTIONS IMMUNITY TEST

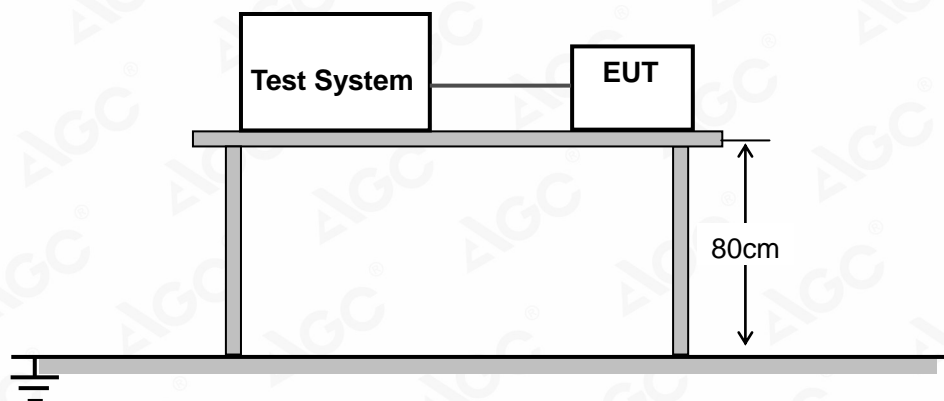

### 7.8.1 TEST SPECIFICATION

<b>Basic Standard</b>	EN 61000-4-11
<b>Voltage Dips</b>	100% reduction, 0.5 Cycle 100% reduction, 1.0 Cycle 30% reduction, 25 Cycles
<b>Voltage Interruptions</b>	100% reduction, 250 Cycles
<b>Voltage Phase Angle</b>	0°, 45°, 90°, 135°, 180°, 225°, 270°, 315°
<b>Test Conditions</b>	Temperature/ Humidity:25°C/50%

### 7.8.2 TEST PROCEDURE

- The power cord was used as supplied by the manufacturer. The EUT was connected to the line output of the Voltage Dips and Interruption Generator.
- The EUT was tested for (1) 100% voltage dip of supplied voltage with duration of 0.5 cycles, (2)100% voltage dip of supplied voltage and duration 1.0 cycle. (3) 30% voltage dip of supplied voltage and duration 25 cycles. (4) 100% voltage interruption of supplied voltage with duration of 250 Cycles was followed,
- Voltage reductions occur at 0 degree crossover point of the voltage waveform. The performance of the EUT was checked after the voltage dip or interruption.

### 7.8.3 TEST SETUP

For the actual test configuration, please refer to Appendix II : Photographs of the Test Configuration.

Test item	Voltage Reduction	Duration (cycle)	Times	Interval (Sec)	Observation	Conclusion
Voltage dips	100%	0.5	3	10	TT,TR	Pass
	100%	1	3	10	TT,TR	Pass
	30%	25	3	10	TT,TR	Pass
Voltage interruptions	100%	250	3	10	TT,TR	Pass

### EN 301 489-17 V3.2.0 WIFI (MODE 4) TEST RESULT

Test item	Voltage Reduction	Duration (cycle)	Times	Interval (Sec)	Observation	Conclusion
Voltage dips	100%	0.5	3	10	TT,TR	Pass
	100%	1	3	10	TT,TR	Pass
	30%	25	3	10	TT,TR	Pass
Voltage interruptions	100%	250	3	10	TT,TR	Pass

### EN 301 489-19 V2.1.0 GPS (MODE 5) TEST RESULT

Test item	Voltage Reduction	Duration (cycle)	Times	Interval (Sec)	Observation	Conclusion
Voltage dips	100%	0.5	3	10	TR	Pass
	100%	1	3	10	TR	Pass
	30%	25	3	10	TR	Pass
Voltage interruptions	100%	250	3	10	TR	Pass

**Phenomenon:** no function loss during the test.

PERFORMANCE CRITERIA	
Criteria requested	<input type="checkbox"/> A / <input checked="" type="checkbox"/> B / <input type="checkbox"/> C
Criteria meet	<input checked="" type="checkbox"/> A / <input type="checkbox"/> B / <input type="checkbox"/> C
